

Assembly of the Dwadder

STEP 1: Place tubes in large hole of bottom cover one at a time while inserting 11" zip tie in tube holes. The rough side of the zip tie on the inside.

STEP 2: Place 11" zip tie in tube holes.

STEP 3: Tighten 11" zip tie just a little to form a circle.

STEP 4: Take one of the 20" zip ties rough side towards the inside and place on the outside on the 11" zip tie and then through the bottom hole of the bottom cover.

STEP 5: Pull the 20" zip ties to the other 2nd bottom cover and place through the bottom hole and then to the outside of the 11"zip tie.

STEP 6: Attach the 2nd 20"zip tie to the 1st 20" zip tie and repeat the same process. Both sides should be identical with 3 tubes on each side of the 20" zip ties.

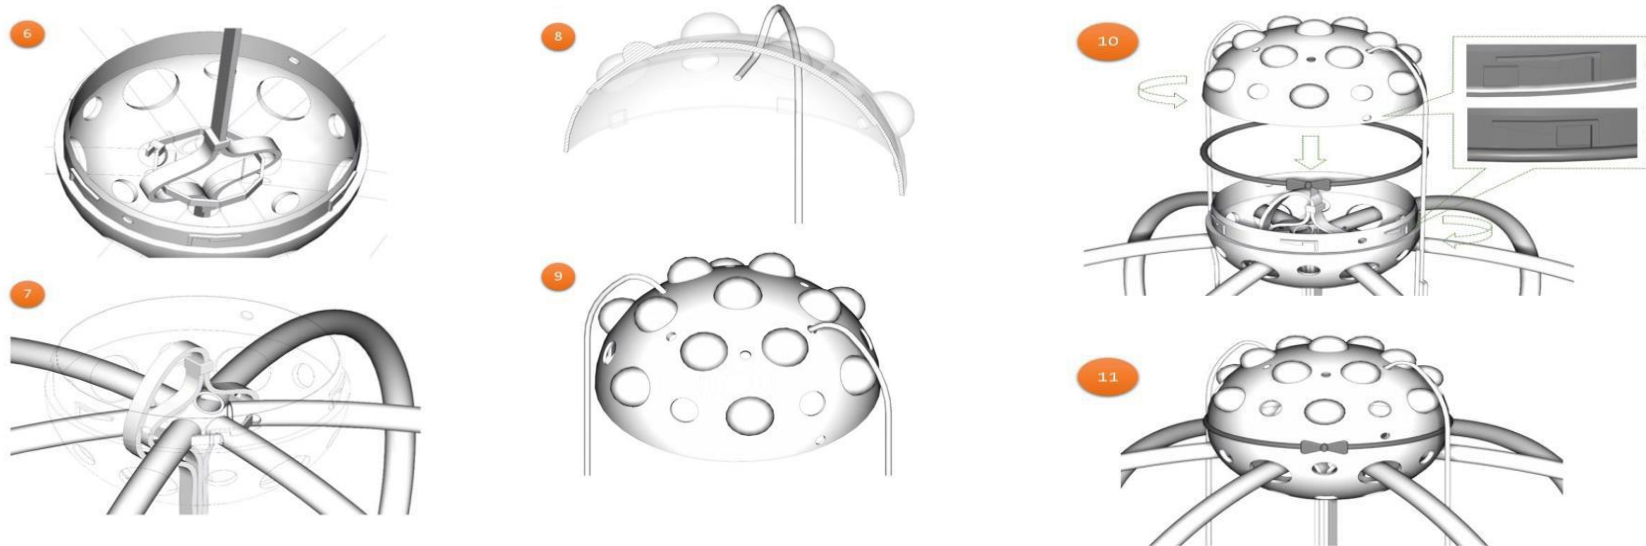

STEP 7: Pull the 11" zip ties tight then cut off extra end of the 11" zip tie. Then pull the 20" zip tie tight a little at a time so the length of the extra will be the same. Then put the extra back through the bottom hole of the bottom cover.

STEP 8: Place the silicone cord through one of the small top holes of the top cover.

STEP 9: Then back through a small hole straight across. Pull through holes so both silicone cord length is even.

STEP 10: First place the silicone bow tie on the bottom cover below the locking area of the bottom cover.

STEP 11: Line up the top cover small hole on the edge with the lock before the small hole on the edge of the bottom cover. Then push down and turn the top and bottom covers in opposite direction to lock the covers together. The 2 small holes should be lined up from the top and bottom cover.

STEP 12: Take the silicone cord and the small cord stopper. Push down on the top of the cord stopper and place one of the silicone cord through the small hold of the cord stopper.

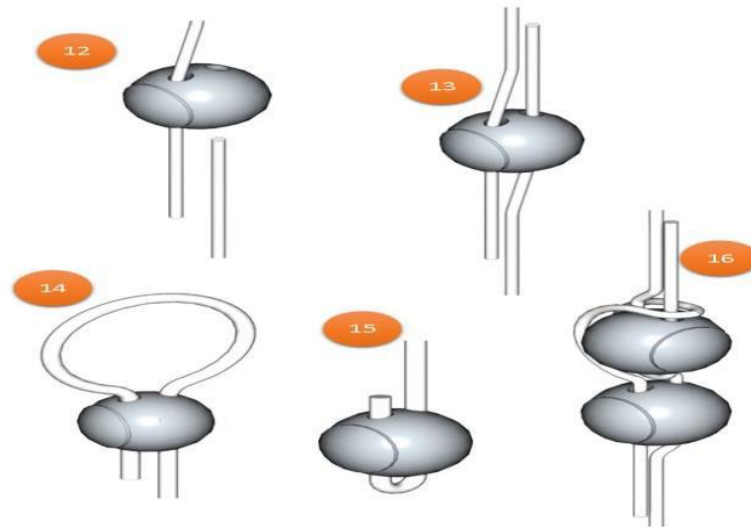

STEP 13: Then take the other silicone cord and place it through the small hole of the cord stopper in the opposite direction of the 1st silicone end. You can do the same on both sides or go to step 14 for an **ALTERNATIVE WAY** to use the silicone cord.

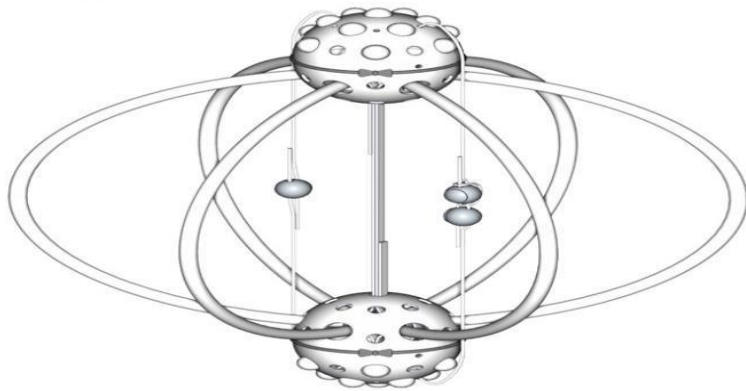

STEP 14: Take one silicone cord and place it through one hole of the cord holder and then back through forming a loop.

STEP 15: Take the other side of the silicone cord and form a loop but pull it tight to fit snug against the cord stopper.

STEP 16: Place the loop on one side of the silicone cord around the other cord stopper to lock silicone cord together. This allows you to wrap the cord around a blanket or sheet and lock silicone cord together instead of pulling the silicone and sliding blanket or sheet through the stretch silicone cord.

ALTERNATIVE WAY
14-16

How to Use the Dwadder

Simply pull half of your blanket or sheet out of the washer. Then pull the silicone cord to slide the blanket or sheet between the silicone cord and the Dwadder. Slide the Dwadder to the center of the sheet or blanket then put your blanket or sheet in the dryer with the Dwadder attach to your blanket or sheet. You can use both silicone cords for two small blankets or sheets just don't place 2 blankets or sheet on top of each other or it will take longer to dry. For Video instructions please go to the website www.Defuturesolutions.com or type Dwadder on YouTube.

⚠ WARNING: CHOKING HAZARD-Small parts.

Not for children under 3 yrs.
